Patented technology for automatic unwrapping:

Unstable goods on pallets
- Plastic containers
- Jerry cans
- Steel drums
- Bottles
- Cardboard boxes
- and others

Unwrapper
Core
The missing link in your automated warehouse

As automation in warehouses increases, unwrapping of pallets remains manual labor – until now!

The fully automatic unwrapping unit is a revolutionary new technology, which accurately and efficiently cuts and removes the stretch wrap, even from unregular shaped shipping pallets.

It’s therefore the perfect choice for any warehouse that receives and unpacks a large amount of pallets each day.

The VARO unwrapping unit pays off

Self-operating
no operator needed, thus providing savings in factory wages

Safe
reduces risk for work related injuries involving knives or falls from ladders and prevents the discomfort of static shock

Fast
unwraps up to 100 pallets per hour

Careful
unwraps without any damage to the goods packed on the pallets
Patented technology with high flexibility

With the high capacity unwrapping unit, you’ll get:

- a flexible unit which handles all standard pallets - EUR EPAL 1-7 (up to 1200x1200mm)
- a versatile unit which can handle unregular stabled products on pallets and pallets up to 2.7 m in height (US: 8’ 10” – 8 feet, 10 inches)
- a place saving unit that can either stand alone or be smoothly integrated into your existing automation lines
- an eco-friendly unit - no compressed air needed

How does it work?
